

India-Japan Joint Certificate Course for ADVANCED GENERAL DENTAL PRACTICE

Inductions: CBCT| Implants| CAD-CAM

After completion of BDS and internship the dental doctors are eligible to start treatment on patients independently. The dental doctors are confident if they have evidence-based knowledge and experience. Also the 4 years' BDS course plus one year internship is good to develop skill and knowledge, but to make it great, we need some more input with appropriate knowledge and skill for applications. Moreover, some of the clinical knowledge and procedural skills are needed to be add-on which not only helps top-ups with the knowledge and clinical skills, also meet the requirement of 5 years undergraduate course run by UK, American and Australian Universities including some of the Gulf countries and their statutory bodies to the process of accreditation. This course is uniquely designed after proper consultation with international learned organizations,

Certificate

The Certificate will be awarded by;

- **A.B. Shetty Memorial Institute of Dental Sciences**
- **Jointly with**
- **Nara Medical University, Japan**

Evidenced Based Dentistry	Knowledge and Skill	Referral Decision	Ethics and Law	Clinical Audit and Research
---------------------------	---------------------	-------------------	----------------	-----------------------------
